SUMMARY

Fourth-year BS Information Systems student graduating June 2027, available for internship or OJT placement in web development, application support, database or data analysis work. I build systems end to end — responsive front ends in HTML, CSS, JavaScript and React, the PHP and MySQL behind them, and the reporting on top. Most recently a school portal with a three-step grade review, a reader for teachers' Excel class records and a Random Forest at-risk prediction written in PHP, on a MySQL schema I designed myself.

EDUCATION

Bachelor of Science in Information Systems

Expected June 2027

Kolehiyo ng Lungsod ng Dasmariñas — Dasmariñas, Cavite

- Relevant coursework: Web Systems & Technologies · Information Management · Systems Analysis & Design · Data Structures & Algorithms · Object-Oriented Programming · Quantitative Methods

TECHNICAL SKILLS

Web development: HTML5, CSS3, JavaScript (ES6+), TypeScript, React, Tailwind CSS, responsive design, Flexbox and Grid

Backend and databases: PHP, session-based authentication, access control, CRUD, MySQL, SQL, database schema design, phpMyAdmin, backup and restore

Data and reporting: SQL queries and aggregation, dashboard reporting, Python (pandas, matplotlib), data cleaning

Tools and testing: Git, GitHub, VS Code, XAMPP, Vite, Netlify, Vitest

PROJECTS

Dasmariñas North NHS — Website & School Portal

January 2026 – October 2026

Full-stack — HTML, CSS, JavaScript, PHP, MySQL · dnnhs-demo.free.nf

- Built learner, teacher and office portals behind one PHP session login; head teacher and adviser are duties inside the teacher portal, so nobody needs a second account.
- Implemented a three-step grade review — subject teacher, department head, class adviser — where only the adviser publishes and a correction is a full re-upload reviewed again.
- Wrote an in-browser reader (SheetJS) for the division's E-Class Record workbook that takes each learner's Initial and Term Grade; checked against 500+ real teacher files.
- Built SARDO, a Random Forest written from scratch in PHP that flags learners likely to fall below 75 next term from six predictors; its results match scikit-learn's exactly.
- Implemented DepEd Order 015, s. 2026 grading — whole-number finals, descriptors, the Academic Excellence Award, Summer Remedial — and archive-only records with `.sql` backups.

Lean Bulk Tracker — calorie & macro tracking app

October 2026

Solo — React, TypeScript, Vite, IndexedDB · lean-bulk-tracker-jwg4.netlify.app

- Built an installable, offline phone app that sets a daily calorie and macro target from BMR, logged exercise (MET values) and a lean-bulk surplus, storing everything on the device.
- Wrote a meal-plan generator that picks from a 222-food database and solves portions by bounded least squares, snapped to real servings and re-balanced across the day.
- Measured real energy burn from four weeks of food logs and a weight-trend regression with a 95% margin; 59 Vitest unit tests cover the maths.

CERTIFICATIONS & LANGUAGES

- freeCodeCamp: Responsive Web Design, 2026 · JavaScript Algorithms and Data Structures, 2026
- Languages: Filipino (native) · English (professional working proficiency)
